

TouchNet App (Android) installation Guide

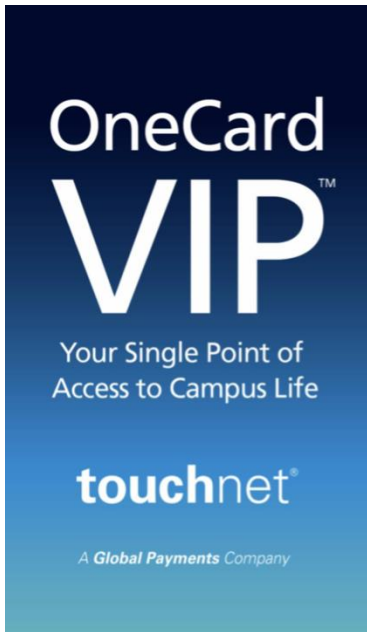

Open the Google Play store.
Search "TouchNet OneCard".

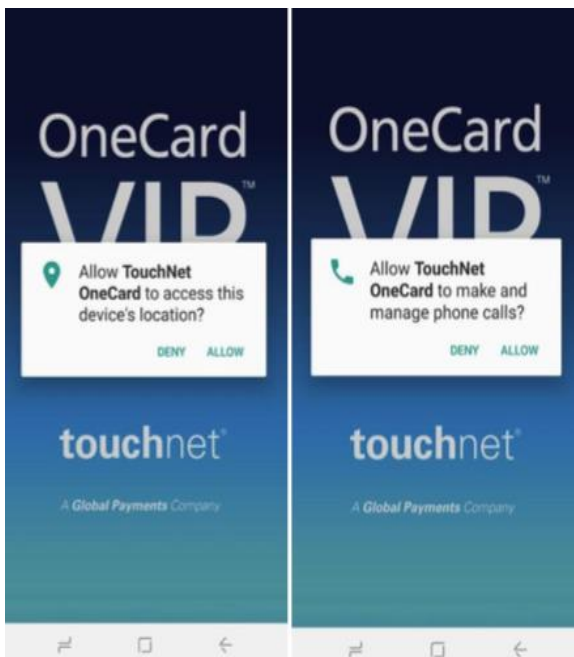

Click "Install"

Click the button that says open,
navigate to the app section of your
phone to find the newly installed
Touchnet OneCard App.

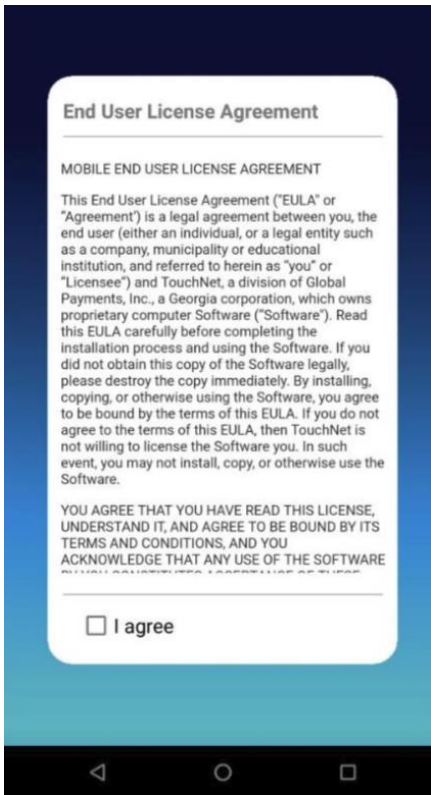

The App will open and the One Card VIP Splash screen will load

The app will load and ask to share your location

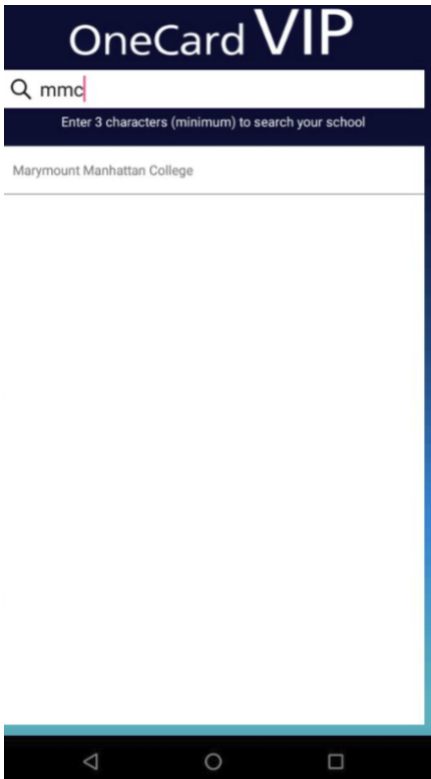

It asks this so it can tell where you are on campus and allow you to perform mobile swipes for access and meal plan usage.

It will also ask for permission for access to phone features, **we recommend allowing this permission.**

The app will then load the End User License Agreement.

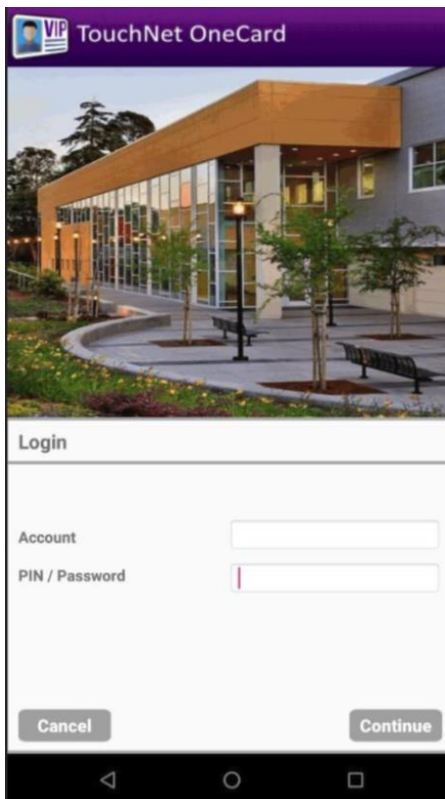

You should look over this and then toggle the “I agree” button, to continue using the app.

Search for Marymount Manhattan College

You can use “MMC” or “Mar”

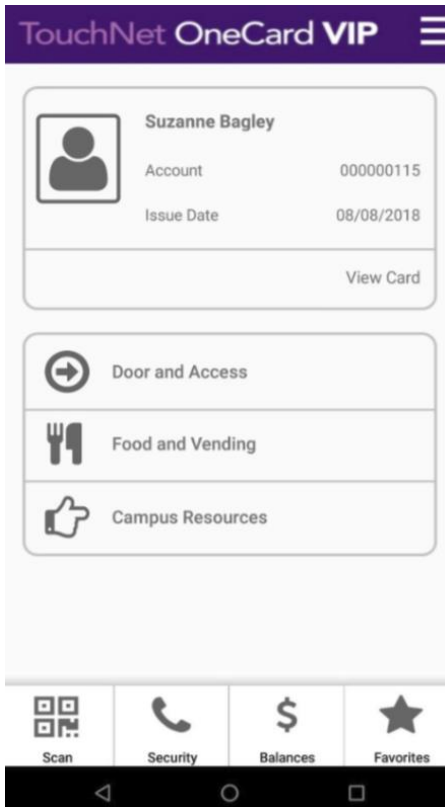

Tap on Marymount Manhattan College

Here is the default login screen.

Account: MMC ID#

Pin/Password: (User created password from TouchNet OneWeb)

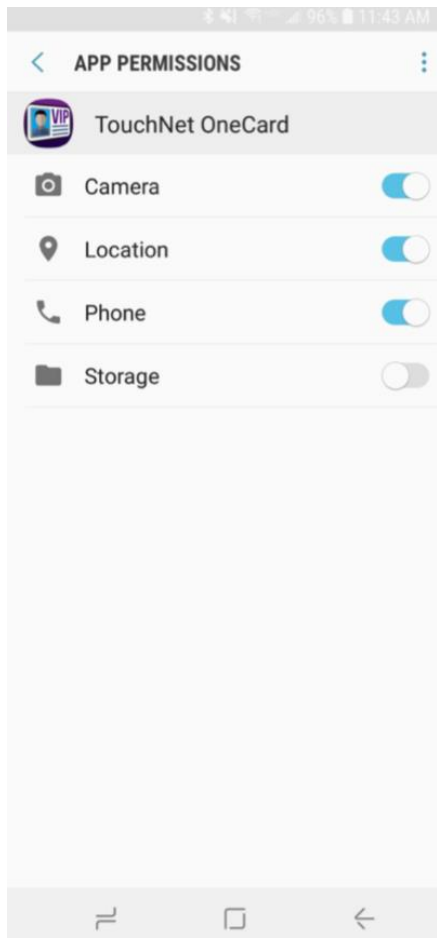

If your phone has a fingerprint reader, you will be asked if you'd like to allow Touchnet Onecard to use it as a login permission.

You can select Allow or Don't Allow

If you do not currently have fingerprint credentials stored on your phone this will not work.

You must have fingerprint ID stored on your phone for Fingerprint ID to work

You may need to manually set the permissions of the App.

To check these features:

Click settings>App Settings>Select TouchNet Oncard>click on App info>App Permissions

You will now have full access to the TouchNet One card App

* You are granted access at that time. If you have any questions please call 212.517.0580
