Attempted Method of Passing Math Class

Michael Aromando (71 digits)

“Run!” I hear. I bring lockpicks in little boxes and carry academic textbooks; eagerly, searching for Pi and, avoiding tall guards. In remote view, the men stampede and it creates plentiful chaos. “Pythagoras” is declared, suddenly, when a vestibule appears. I unlock quadratic and trinomial equations. The formula works. I calculated their solution to Pythagoras’ threshold. Weirdly here, Professor Wat’s, seen there absorbing Pi, and Pythagoras’ ancient writings. I freeze. “What?”

*How I left a dream abandoned is absurd.
Blind and dense disaster, paralyzed absence.
Recognize it's my war, absolute pain filled my breath.*

*Alas, one day, familiar aid in vacuity, accompany
alone, distressed me.
Becoming accepted when I disappear remains a battle.
Acquitted, our liberated unplugged eye. Freedom...
breath, a tenderness taken.

Any & many a weary professor

Do peruse piles and piles,

Towering, teetering, swaying mountains.

Why oh why?

Spurious sham output of sordid Chat GPT!
